PROFILE

AI automation engineer and frontend developer who turns messy manual processes into self-running workflows (Arabic-first document extraction with vision LLMs, agents with strict tool-calling, MCP servers) and builds the React interfaces people use on top of them. 3+ years of professional experience, 4 years of hands-on React, and 1+ year shipping production automations on n8n and the OpenAI API. As Technical Lead at DFS I owned delivery end to end on two custom CRMs: DFS's own, where I built every page, and a customized CRM for WAIS, DFS's parent company, where I also led the automation. Built the frontend and AI engine of Smart Scanner, a bilingual AR/EN invoice SaaS with 494 automated tests and CI quality gates. Native Arabic, professional English.

CORE SKILLS

Automation & AI: n8n (production workflows, self-hosted with Docker), AI agents & LLM tool-calling design, Model Context Protocol (MCP) servers, human-in-the-loop workflows, OpenAI API (GPT-5.4 mini, GPT-4.1 Vision, GPT-4o), Anthropic Claude API, structured JSON outputs, prompt engineering, cost-aware model routing, document AI & Arabic OCR/extraction, web scraping, Telegram Bot API, webhooks, error handling & retries

AI-Assisted Engineering: Claude Code every day (planning, implementation, tests, code review, docs), Claude skills & plugins, MCP connectors, Claude in Chrome

Frontend: React.js / React 19, TypeScript, JavaScript (ES6+), Next.js, HTML5, CSS3, Tailwind CSS, Material-UI, Vite, TanStack Query, React Hook Form, React Router, Recharts, i18n & RTL (Arabic/English), responsive design, web accessibility, PWA & service workers, Canvas / WebGL / Three.js, Figma-to-code

APIs & Data: REST APIs, API integration, OAuth 2.0, MySQL & stored procedures, Prisma, Node.js, Python (pandas, TensorFlow/Keras), Google Sheets & Drive APIs, JSON Schema, Laravel Echo (real-time)

Testing, DevOps & Tooling: Vitest, React Testing Library, Playwright, CI/CD (GitHub Actions), atomic zero-downtime deploys, Docker, Cloudflare (DNS, Pages, R2), VPS & Apache hosting, Git, GitHub, GitLab, Jira, Trello, Figma

Leadership & Delivery: requirements gathering, scope & cost estimation, API contract design, user stories, sprint planning, Agile/Scrum, code review & coding standards, mentoring, cross-functional coordination

EXPERIENCE

Distinctive Frontier Co. (DFS) · Al Khobar, KSA — **Jan 2025 – Nov 2026**

Technical Lead (Official title: Software Engineering Supervisor) — Jan 2026 – Nov 2026

- Led engineering delivery on two custom CRMs: supervised the backend developer; owned requirements, user stories, task breakdown, code review, and release.
- **Custom CRM for DFS, built around its fire-pump sales cycle:** built every page in React 19 and TypeScript, bilingual AR/EN with full RTL, including an enquiry board with pump specs and revision history, released and budgetary quotations with follow-up (stage, win probability, PO date, reminders), PO drafts and CSV / PDF export, a Product Support flow, and sales analytics with a probability-weighted pipeline.
- Built its separate quotation app, real-time notifications and @mentions (Laravel Echo / Reverb), and custom roles built from 120+ permissions, with route guards covered by Playwright tests.
- **Customized CRM for WAIS, DFS's parent company:** led its frontend, delivery, and automation in React + TypeScript + Tailwind v4, with type-checked AR/EN translations and CI/CD that ships every push to main with zero downtime.
- Set coding standards, reviewed every frontend change before merge, mentored developers; aligned delivery with the backend (Laravel) and UI/UX teams so product ideas reach production on schedule.
- Introduced workflow automation with n8n and the OpenAI API for repetitive team work; used Claude Code daily to plan, build, test, and review.

Frontend Developer / Project Coordinator — Jan 2025 – Jan 2026

- Built the frontend of DFS's custom CRM & quotation platform from scratch in React: task tracking, quotation generation, and workflow management in one place, replacing spreadsheets and hand-made quotes in every department.

- Cut quotation preparation from a manual process to under 2 minutes once the data is entered; the platform was adopted by all 15 employees.
- Coordinated frontend and backend teams on requirements, API contracts, and payload reviews to keep delivery on schedule; promoted to lead the team within 12 months.

Founder & Project Lead · NexLead, software & automation studio (side venture, remote) **Mar 2025 – May 2026**

- Ran client automation and software projects end to end: requirements, scope, workflow design, cost estimation, acceptance criteria, and release, with work broken into user stories on Trello.
- Led delivery of GoldenTag, a jewelry-store management app (Flutter) with inventory, barcode scanning, USD/SYP exchange rates, and sales logging, from requirements to Google Play; adopted by 3 gold shops.
- Set up the studio's self-hosted infrastructure: n8n in Docker on a VPS, Apache virtual hosts for product subdomains, Cloudflare DNS and R2 storage, and GitHub Actions deployments.

Frontend Developer (Part-Time, Remote) · Khwarizm Technologies, Riyadh **Sep 2024 – Apr 2025**

- Developed a responsive web dashboard in React and Tailwind CSS within a full product team, converting detailed Figma designs into accessible, pixel-accurate, reusable components with efficient state management.
- Took part in code reviews and upheld coding standards to keep the codebase clean and optimized.

Frontend Developer (Freelance) · Minicodeleader, Remote **Jun 2023 – Feb 2024**

- Designed and built responsive interfaces for a kids' education platform with React and Material-UI (course browsing, lessons, and saved courses), translating Figma designs into reusable components.

PROJECTS

Demo videos and walkthroughs on LinkedIn.

Smart Scanner: Arabic-first AI invoice management SaaS · private beta receipt.nexleadtech.com

- Built 2 of its 3 layers: the complete frontend (3 role-based apps for admin, accountant, and employee in one React 19 + TypeScript codebase of 204 source files, bilingual AR/EN with full RTL) and the entire AI extraction engine in n8n with GPT-4.1 Vision.
- Extracts 70+ fields incl. line items and handwritten Arabic in ~10 s; verifies each file is a genuine invoice, runs duplicate and fraud checks (SHA-256, perceptual hashing, EXIF), and cuts AI cost ~75% by sending PDFs with extractable text to a text model, with vision as fallback.
- 494 automated tests (Vitest, React Testing Library), CI quality gates on GitHub Actions, and atomic zero-downtime deploys; 4 subscription tiers with feature gating, 13+ server-side filters, in-page camera capture, and Excel export.

CV Screener: full-stack AI screening product cv-screener.nouraldeentofi.com

- Next.js 16, React 19, TypeScript, Tailwind 4, Prisma, MySQL, and Docker on my own VPS; Arabic-default bilingual UI with full-text search, filters on every field, weighted role screenings, and CSV export.
- Three n8n AI agents (screening, candidate profiles, batch summaries) called server-to-server with a shared secret; every AI score must quote the CV and the server checks the quote before it counts; 1,189 automated tests, performance-tested on 5,000 CVs.

AI Teaching Assistant Bot: Arabic natural-language Telegram agent · in production for a private tutor since 2025

- The tutor manages students, schedules, recurring lessons, cancellations, and dues entirely through chat; an n8n AI Agent calls custom CRUD tools against MySQL / Google Sheets under strict business rules instead of guessing.
- Multi-tenant-ready design: billing, usage metering, free-trial gating, session memory, and Saudi-time reminders.

AI Job-Matching Pipeline: scheduled agent with human-in-the-loop

- Daily n8n pipeline runs 5 searches across LinkedIn / Indeed / Glassdoor (JSearch API), deduplicates results in n8n Data Tables, scores each job 1–10 with an LLM grader returning structured JSON, and sends only top matches to Telegram for human approval.

MCP Search Server: AI tools over real data

- A Model Context Protocol server (Node.js, JSON Schema) that lets Claude query live data through tools instead of only generating text; the same pattern powers the MCP server that ships with nouraldeentofi.com.

Business Card Extractor: photo → phone contact in one tap

- React + TypeScript frontend over an n8n / GPT-4o Vision pipeline that validates the data, stores it in Google Sheets, and returns a vCard: zero lines of custom backend; one-tap save added from user feedback.

More Production Automations: n8n + LLMs

- **Universal Web Scraper:** one link in, the whole site crawled into category-tabbed Google Sheets / Excel, running on 4 n8n workflows.
- **Smart Lead Finder:** B2B lead generation for Saudi and Jordanian markets: multi-query place search, website scraping for emails and WhatsApp numbers, priority scoring, and duplicate-safe appends into segmented sheets.
- **CRM Lead Cleaner:** deduplicates incoming leads, validates emails, flags missing fields, and splits Clean / Rejected with a reason on every rejection plus a quality summary per run.

Web Projects: personal site, PWA & UI showcase

- **nouraldeentofi.com:** hand-written bilingual site (HTML, CSS, ES modules), Arabic-first with English at /en/, on Cloudflare Pages; machine-readable via llms.txt, a JSON Resume API, and an MCP server for AI assistants.
- **Nour Motion Studio:** Arabic video editor that runs entirely in the browser (318 templates, 349 scene transitions) and encodes MP4 on the user's own device with WebCodecs: no server, no account.
- **The Complete Umrah Guide:** offline PWA in one HTML file: 10 languages in 5 writing systems, tap counters and text-to-speech for pilgrims who cannot read; open-source on GitHub.
- **Websites & UI craft:** 18 websites for professionals and businesses, each built around its own visual idea, plus a gallery of 120 single-file designs (Swiss print, neo-brutalist, desktop OS, 3D galaxy, pixel arcade) in Canvas, WebGL, and Three.js.

EDUCATION

Bachelor of Information Technology Engineering · University of Kalamoon **Sep 2019 – Aug 2024**

- **Graduation project (2024)**, fitness nutrition recommender: collected public datasets (Kaggle) and cleaned and preprocessed them with Python and pandas, then built an ensemble of 5 classification algorithms that turns a gym trainee's data into a personalized diet plan; integrated with a mobile app built by teammates.
- **Semester project (2023)**, plant-health assistant: a VGG16-based CNN (TensorFlow/Keras) that identifies plants from photos, assesses their health, and recommends care steps.

CERTIFICATIONS & AWARDS

- **Building Apps and AI Agents with Claude Code**, Dr. Ryan Ahmed (Coursera) · Oct 2026
- **Claude Cowork, Skills and Plugins for Workflow Automation**, Dr. Ryan Ahmed (Coursera) · Oct 2026
- **AI-Powered Productivity: Claude in MS Office**, Dr. Ryan Ahmed (Coursera) · Oct 2026
- **Claude Chat Mastery**, Dr. Ryan Ahmed (Coursera) · Oct 2026
- **AI & Python:** Python for Data Science, AI & Development · Generative AI: Prompt Engineering Basics (IBM, 2024)
- **Frontend:** Advanced React (Meta) · TypeScript in React (Coursera) · Tailwind CSS (Packt) · Clean Code (Scrimba)
- **Project Management:** Foundations & Project Initiation (Google) · Jira: User Stories & Roadmaps (Coursera) · 2025
- **ACPC Syria (ICPC regional qualifier):** team leader; ranked 4th among Syrian private universities · Sep 2021
